# ANDROID LIBRARY BINARY ANALYSIS

ISSUE	SEVERITY	DESCRIPTION	FILES
Found elf built without Position Independent Executable (PIE) flag	high	In order to prevent an attacker from reliably jumping to, for example, a particular exploited function in memory, Address space layout randomization (ASLR) randomly arranges the address space positions of key data areas of a process, including the base of the executable and the positions of the stack, heap and libraries. Built with option <strong>-pie</strong>.	lib/mips64/libpl_droidsonroids_gif.so
Found elf built without Stack Protection	high	Stack canaries can greatly increase the difficulty of exploiting a stack buffer overflow because it forces the attacker to gain control of the instruction pointer by some non-traditional means such as corrupting other important variables on the stack.
